

Investment Memorandum & Acquisition Framework

A premier value-add acquisition opportunity of a 5-star beachfront resort asset located in the high-barrier, supply-constrained Chaweng market of Koh Samui, Thailand.

Nora Buri Resort & Spa

Location	Chaweng Beach Frontage, Koh Samui
Land Footprint	22-0-79.6 Rai (35,518.4 Sqm)
Total Inventory	146 Keys
Inventory Breakdown	96 Rooms / 48 Private Villas / 2 Suites
Operational Since	2008 (Excellent Structural Integrity)

EXCLUSIVE ASKING PRICE

2,500,000,000
THB

IMPLIED ENTRY CAPITALIZATION RATE: ~4.4%

67%	5,000 ฿	110M ฿
OCCUPANCY (2024)	ADR (ACTUAL)	GOP (ACTUAL)

1. 2026 Macro Context & Benchmarking

As of mid-2026, the Southern Thailand resort hospitality sector (Phuket, Koh Samui, Krabi) is undergoing a profound structural shift from volume-driven recovery to high-yield, quality-led expansion. According to recent C9 Hotelworks and Knight Frank data, luxury resort properties in the region achieved a powerful **20.4% year-on-year expansion in Average Daily Rate (ADR)**, proving immense pricing power within upper-upscale segments despite global normalization trends. While neighboring mega-markets like Phuket navigate an expanding 5-year pipeline of over 100,000 keys—leading to compressed occupancy outside peak windows—Koh Samui offers an elite, high-barrier-to-entry profile. Supported by infrastructure catalysts including the proposed Koh Samui Expressway Project and steady international airlift expansion, prime beachfront footprints on Chaweng present a finite, irreplaceable land bank.

Regional Market Trends (C9 / JLL Data)

- **Phuket Luxury Segments:** Transitioned to yield-first strategies; select submarkets experienced a 21% surge in ADR backed by European long-stay wealth mitigation.
- **Pattaya Cluster:** Highly exposed to domestic "Friday-Sunday" demand spikes; luxury inventory remains limited compared to midscale supply.
- **The Samui Advantage:** Finite premium beachfront parcels insulate existing luxury assets from aggressive developer pipelines.

Institutional Underwriting Climate

- **Disciplined Lending:** Hospitality debt markets remain selective. Average Tier-1 Loan-to-Value (LTV) sits at 50%–60% with minimum Debt Service Coverage Ratios (DSCR) underwritten at 1.4x–1.5x for stabilized operations.
- **ESG Mandate:** Institutional exit liquidity is strictly tied to energy-efficient infrastructure and sustainability frameworks, heavily favoring structured renovation over greenfield developments.

2. Replacement Cost Valuation (Buy vs. Build)

To demonstrate instantaneous structural equity for institutional buyers, a formal Replacement Cost New (RCN) model has been executed. Greenfield development within premium Chaweng zones faces intense regulatory hurdles, island logistical premiums, and severe construction timeline creep.

Replacement Cost New (RCN) = Land Cost + Hard Costs + FF&E + Soft Costs = 2,630,000,000 THB

COST CATEGORY	UNDERWRITING ASSUMPTIONS	ESTIMATED COST (THB)
Land Value (Premium Beachfront)	22-0-79.6 Rai (~8,880 Sq.w) appraised at an institutional baseline of 150,000 THB/Sq.w	1,330,000,000 THB
Hard Construction Costs	Estimated Gross Floor Area (GFA) of 20,000 Sqm at 45,000 THB/Sqm (Luxury island spec)	900,000,000 THB
FF&E / OS&E Allocation	Premium 5-star resort specification at approximately 1.71M THB per key blended allocation	250,000,000 THB
Soft Costs & Development Fees	Architectural, engineering, entitlement, legal, and pre-opening fees modeled at ~6% of total	150,000,000 THB
TOTAL REPLACEMENT COST NEW	Bypasses 36-48 months of construction & entitlement risk	2,630,000,000 THB

3. 5-Year Scenario Horizon Matrix

Four strategic vectors have been modeled to identify the optimized capital allocation path to maximize Levered Internal Rate of Return (IRR) and Multiple on Invested Capital (MOIC).

Metric	Scenario 1: Hold & Stabilize	Scenario 2: Full Rebrand (Recommended)	Scenario 3: Branded Residences	Scenario 4: Land Bank & Redevelop
Strategic Play	Maintain current brand; baseline asset management focus.	Flag with global luxury operator; execute full CapEx repositioning.	Carve out 48 high-end villas for leasehold private sales.	Total demolition; build ultra-luxury signature estate.
Total Capital Outlay	2,550,000,000 THB	2,850,000,000 THB	2,750,000,000 THB	3,800,000,000 THB
Target Stabilized ADR	6,500 THB	12,000 THB	10,500 THB	35,000 THB
Year 3 Stabilized NOI	135,000,000 THB	285,000,000 THB	220,000,000 THB	320,000,000 THB
Assumed Exit Cap Rate	6.50%	6.00%	6.50%	5.50%
Projected Levered IRR	8.2%	22.4% BEST PLAY	18.5%	14.1%

Metric	Scenario 1: Hold & Stabilize	Scenario 2: Full Rebrand (Recommended)	Scenario 3: Branded Residences	Scenario 4: Land Bank & Redevelop
Target MOIC	1.4x	2.8x	2.1x	1.9x
Payback Period	8.5 Years	5.2 Years	4.8 Years (Accelerated via sales)	7.5 Years

4. Institutional M&A Risk & Mitigation Matrix

Identified Risk	Probability	Severity	Institutional Mitigation Framework	Residual Risk
1. Coastal Weather / Climate Impact	MEDIUM	HIGH	Incorporate civil engineering reinforce seawall structures during Year 1 CapEx schedule.	LOW
2. CapEx Refurbishment Cost Inflation	MEDIUM	HIGH	Utilize Guaranteed Maximum Price (GMP) fixed contracts with Tier-1 general contractors.	LOW
3. Renovation Phase Displacement	HIGH	MEDIUM	Execute phased, localized zoning shutdowns to sustain partial baseline operational cash flow.	MEDIUM
4. Global Brand Underperformance	LOW	HIGH	Tie Hotel Management Agreement (HMA) to rigorous performance hurdles and GOP-indexed fees.	LOW
5. Interest Rate Volatility	MEDIUM	HIGH	Structure senior acquisition debt facility with a fixed rate derivative swap for the initial 36 months.	LOW

Identified Risk	Probability	Severity	Institutional Mitigation Framework	Residual Risk
6. Island Talent Pool Constraints	HIGH	MEDIUM	Establish dedicated higher-standard on-site staff housing facilities and structured regional cross-training.	MEDIUM
7. Latent Structural Defects	LOW	HIGH	Deploy comprehensive engineering and MEP structural due diligence prior to binding LOI execution.	LOW
8. Capital Market Exit Liquidity	MEDIUM	HIGH	Ensure early institutional alignment with global sovereign wealth funds and cross-border REIT asset mandates.	LOW

5. Targeted Liquidity & Capital Exit Avenues

To ensure a defined monetization horizon, the investment framework incorporates three robust, distinct institutional exit strategies engineered into the 5-year stabilization underwriting structure.

A Institutional Outright Sale Targeted cross-border transaction to a global private equity fund, sovereign wealth fund (SWF), or ultra-high-net-worth family office	B Cross-Border REIT Injection Monetize the asset by executing a structured injection into an active regional hospitality REIT	C Refinance & Hold Execute a cash-out asset refinance facility upon Year 4 stabilization, leveraging the expanded NOI to extract original equity while

seeking scalable luxury footprints in Southeast Asia.

TARGET YIELD: 6.00% CAP RATE

(Singapore/Bangkok), enabling partial cash-out while retaining lucrative recurring base dividends.

TARGET YIELD: 6.25% - 6.50% CAP RATE

preserving long-term core equity appreciation.

TARGET LTV: UP TO 65% ON RE-VAL
